

Accounts Payable Invoice Processing and PayScan Approval Workflow

Doc ID: SOP-AP-001 | Version: 2.1 | Effective: 2024-07-01 | Category: Accounts Payable

Purpose

This procedure defines how vendor invoices are received, coded, routed for approval, and posted to the general ledger in Yardi Voyager using the PayScan module. It applies to all property-level operating expense invoices.

Scope

All trade payables charged to a property operating account. Capital expenditures over the capitalization threshold follow the separate Tenant Improvement and Capital Projects procedure and are out of scope here.

Invoice Intake

All invoices must enter through the PayScan inbox, either by vendor email submission to the property AP mailbox or by scanning a paper invoice. Invoices received directly by a property manager must be forwarded to the AP mailbox and must not be paid outside the PayScan workflow. Each invoice must show a valid invoice number, invoice date, vendor remit-to address, and the property it relates to.

GL Coding

The AP clerk assigns the general ledger expense account based on the nature of the charge, following the GL Account Coding Standards. The property code must match the property that received the goods or services. Invoices spanning multiple properties must be split into separate line items per property so each property bears only its own cost.

Approval Routing and Thresholds

PayScan routes each invoice to an approver based on the invoice amount. The current approval thresholds are:

Invoice Amount (USD)	Required Approver
Up to 5,000	Senior Accountant
5,001 to 25,000	Property Controller
Above 25,000	Chief Financial Officer

An approver may not approve an invoice for which they are the requesting party. Approvals must be recorded in PayScan; verbal or email approvals outside the system are not valid.

Posting and Payment

Once fully approved, the invoice posts to Accounts Payable (account 6000) with the offsetting expense to the coded operating account. Payment is released on the scheduled weekly check run for invoices whose due date falls within the next payment cycle. Early payment is only made to capture a vendor discount and requires Controller approval.

Duplicate Prevention

Before coding, the AP clerk verifies the vendor and invoice number combination does not already exist in Voyager. PayScan flags suspected duplicates, but the clerk remains responsible for confirming the invoice has not been previously entered under a different vendor spelling.

Exceptions

Disputed invoices are placed on hold in PayScan with a note describing the dispute and are not routed for approval until resolved. Invoices without a valid property code are returned to the vendor or property manager for correction.
