

Vendor Setup and Compliance Verification

Doc ID: SOP-VEN-001 | Version: 1.2 | Effective: 2024-06-15 | Category: Accounts Payable

Purpose

This procedure defines how a new vendor is set up in Yardi Voyager and the compliance documentation required before the vendor can be paid.

Required Documentation

Before a vendor is activated, the following must be on file: a completed W-9 (or W-8 for foreign vendors), remit-to address, and a certificate of insurance where the vendor performs on-site work. A vendor cannot be paid until the W-9 is on file, because tax reporting depends on it.

Vendor Master Setup

Create the vendor record with the legal name exactly as shown on the W-9, the remit-to address, the default expense account, and the payment terms. Using a consistent legal name prevents duplicate vendor records, which are a common cause of duplicate payments.

Duplicate Vendor Prevention

Before creating a vendor, search the vendor master for the same name, tax identification number, and remit address. Many duplicate payments trace back to the same vendor being set up twice under slightly different spellings.

Banking Changes

A request to change a vendor's remit-to or banking details must be verified by contacting the vendor through a known phone number on file, not a number provided in the change request itself. This control prevents payment redirection fraud.

Insurance Monitoring

For vendors performing on-site work, the certificate of insurance expiration is tracked, and an expired certificate places the vendor on hold until renewed coverage is provided.

Inactivation

A vendor with no activity is reviewed periodically and inactivated rather than deleted, so that historical payment records remain intact.
